

Table of Contents

Abstract	ii
Preface	iv
Table of Contents	v
List of Tables	viii
List of Figures	ix
Acknowledgments	xviii
1 Introduction	1
1.1 Motivation	1
1.2 The state of the art	2
1.3 Research objectives	5
2 Potential Fields	7
2.1 Discrete linear equations	9
2.1.1 Synthetic example	11
2.2 Large scale problems	13
2.2.1 Parallel out-of-core computing	15
3 Inverse Problem	17
3.1 General ℓ_p -norm regularization	21
3.1.1 Synthetic 1D problem	22

3.1.2	Iterative Re-weighted Least Squares algorithm	25
3.1.3	Case 1: ℓ_1 -norm ($p_s = p_x = 1$)	28
3.1.4	Case 2: ℓ_0 -norm ($p_s = p_x = 0$)	33
3.2	Mixed norm regularization	34
3.2.1	Scaled-IRLS steps	35
3.2.2	Threshold ε -parameter	38
3.2.3	Summary	43
4	Advanced Magnetic Vector Inversion	45
4.1	Susceptibility Inversion	46
4.2	Magnetic Vector Inversion - Cartesian parameters	49
4.3	Magnetic Vector Inversion - Spherical parameters	50
4.3.1	Iterative sensitivity re-weighting	54
4.3.2	Scaled MVI-S algorithm	57
4.4	Synthesis	58
5	Rotated Gradient Norms	60
5.1	Rotated objective function	61
5.2	Synthetic fold model	63
5.2.1	Smooth ℓ_2 -norm solution	64
5.2.2	Sparse ℓ_p -norm solution	66
5.2.3	Directional ℓ_p -norms	67
6	Automated mixed-norm modeling	70
6.0.1	Synthetic 2D example	71
6.1	Exploring the model space	71
6.1.1	Average PCA model	73
6.1.2	Parameters extraction	75
6.2	Dip/strike estimation	77
7	Case Study - Kevitsa Ni-Cu-PGE	78
7.0.1	Geological setting	78
7.0.2	Geophysical data	79
7.0.3	Modeling objectives	84

7.1	Kevitsa: Gravity inversion	85
7.1.1	Structurally constrained density	86
7.2	Kevitsa: Magnetic inversion	86
7.2.1	Magnetic susceptibility model	86
7.2.2	Magnetization vector model	88
7.3	Interpretation	93
8	Conclusion	98
	Bibliography	100
